ACKNOWLEDGEMENT

We would like to express our heartfelt gratitude to Ms Aashima for giving me the opportunity to work under her guidance and helped us gain immensely enriching professional experience. my sincere thanks to project in charge and our internal project guide for giving us valuable inputs and ideas right from the selection of topic for project until its successful completion.

Place : Lovely professional University
Date : 28/12/22

OBJECTIVE OF THE PROJECT

The objective of making a hotel booking site is to provide an easy and convenient way for customers to book hotels. Travellers can book rooms on a computer by using online security to protect their privacy and financial information and by using several online travel agents to compare prices and facilities at different hotels.

INTRODUCTION

A hotel management system is a software application that helps hotels and other types of accommodations manage their operations more efficiently. It can be used to automate and streamline tasks such as booking reservations, managing guest records, and handling payment and billing.

There are several benefits to using a hotel management system:

Improved efficiency: A hotel management system can help hotels streamline their operations and reduce the amount of time and effort required to manage tasks such as booking reservations, managing guest records, and handling payment and billing.

Increased accuracy: A hotel management system can help hotels reduce the number of errors that occur in their operations, such as double-bookings or misplacing guest information.

Enhanced customer service: A hotel management system can provide a better experience for guests by allowing them to easily make reservations and access information about their stay. It can also help hotels to better understand their guests' needs and preferences, allowing them to provide personalized service.

Increased revenue: A hotel management system can help hotels to better manage their inventory and pricing, leading to increased revenue. It can also help hotels to better understand their financial performance and make data-driven decisions about how to optimize their operations.

In summary, a hotel management system is an important tool for hotels and other types of accommodations to manage their operations efficiently, accurately, and effectively, leading to improved customer service and increased revenue.

TECHNOLOGY USED

HTML

HTML stands for Hyper Text Markup Language

HTML is the standard markup language for creating Web pages

HTML describes the structure of a Web page

HTML consists of a series of elements

HTML elements tell the browser how to display the content

HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc.

CSS

CSS stands for Cascading Style Sheets

CSS describes how HTML elements are to be displayed on screen, paper, or in other media

CSS saves a lot of work. It can control the layout of multiple web pages all at once

External stylesheets are stored in CSS files

SOFTWARE : VS CODE

Visual Studio Code, also commonly referred to as VS Code, is a source-code editor made by Microsoft with the Electron Framework, for Windows, Linux and macOS. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded Git.

MICROSOFT EDGE

Microsoft Edge is a web browser developed by Microsoft. It was first released in 2015, replacing Internet Explorer as the default browser on Windows 10. Microsoft Edge is designed to be a lightweight, secure, and fast web browser. It features an optimized layout engine, support for modern web technologies, and integration with Windows features.

FLOW OF PROJECT

This project was not a one mans army, we three together discussed and gave all our effort to make this web site more efficient and user friendly. Our team work has reflected in the results of this web page. We split the individuals duty and everyone started working on the project. I chose the theme of the page like, text-color, backgrounds color . I referred many web pages and acquired knowledge to make these pages . I used all my knowledge in HTML and css and applied to the project. Then at last , I solved some errors in the content that I made during the process , added some features which made the web page more effective

CONCLUSION

The Hotelbooking website project is a great opportunity to create an online system that can help people register for book the room with ease. With its intuitive user interface, peoplr can easily find the hotels without any barriers with just a few clicks. The website is also useful to compare the price of hotel in certain region and they can also choose cheaper room. Additionally, the site provides useful information about the food provided by the hotel. w
